

The best AI
doesn't come from
the biggest companies.

OpenAI builds for everyone.
We build for you.

THE PROBLEM

AI stops at screens. The real world doesn't.

Every major AI company is building for the digital layer. Chat interfaces, API calls, software tools. Meanwhile the physical world — manufacturing, logistics, drones, robotics — runs on intelligence that hasn't changed in decades.

- Enterprise AI spending will hit \$1.5 trillion in 2025 — Gartner. Almost all of it targets software. The gap between digital AI and physical AI is the largest undisrupted market in technology.
- Companies building physical products — drones, robots, autonomous systems — are forced to bolt on AI as an afterthought. There is no unified intelligence layer for the physical world.
- The companies best positioned to build this layer are the ones who already ship AI products that work. Not research labs. Not chatbot companies. Builders.
- The window to own the physical intelligence layer is open right now. First-mover advantage in autonomous systems compounds fast.

"The next \$10T market isn't another chatbot. It's intelligence that moves."

PRODUCTS

Five products. All live. All revenue.

Not a roadmap. A product line. Every vertical ships real revenue.

SEARCH API

SearchHive

— Millions of queries processed

— 1,000+ registered developers

— Undercuts every major search API on price

—

LIVE · REVENUE

DEX PROTOCOL

Hyperswap

— \$10M+ trading volume

— ML-powered swap routing

— Real-time market data ingestion

—

LIVE · REVENUE

PERP. EXECUTION

TIDE Protocol

— \$10M+ volume processed

— ML-powered execution layer

— Intent-based perp routing

—

LIVE · REVENUE

• CUSTOM AI — 100+ DELIVERED

• WORKFLOW AUTOMATION — LIVE

• PRIVATE EDGE — SHIPPED

"Every product listed is deployed and generating revenue. Not a prototype. Not a waitlist."

BUSINESS MODEL

Revenue is not theoretical.

Multiple revenue streams. No single point of failure. Every product monetizes differently.

SEARCHHIVE — SAAS

RECURRING

Per-query pricing that is below every major search API competitor. Developer subscriptions. Enterprise contracts. The closest product to earning millions. Predictable, scalable, compounding.

HYPERSWAP + TIDE — DEFI

VOLUME-SCALED

Swap fees on \$20M+ combined volume across both protocols. ML algorithms optimize routing in real-time. Revenue scales directly with volume and market activity.

ENTERPRISE AI — RETAINER

HIGH-MARGIN

Per-implementation and recurring retainer pricing for custom AI systems. 100+ implementations delivered. 90% of total revenue comes from private clients. High-margin, relationship-driven.

"Three revenue engines. Zero dependency on any single stream."

PROOF

Not a pitch deck. A progress report.

PRODUCTS LIVE 5	PORTFOLIO COMPANIES 5	FIRST-YEAR RUN RATE ~\$500K	MONTH-OVER-MONTH GROWTH 15%+

PORTFOLIO →

SEARCHHIVE

HYPERSWAP

TIDE

SPIDER LABS

MROR

Every company in our portfolio is owned and operated by Venym Labs. Every product is live, deployed, and generating revenue. Built by a solo founder with zero outside funding and minimal sales effort. 90% of revenue from private enterprise clients.

Deployed. Revenue-generating. Expanding into physical automation with government partnerships in progress.

THE ARCHITECTURE

The intelligence layer from digital to physical.

This isn't a chatbot with a system prompt. This is infrastructure.

AGENT 01 ANALYST	Real-time data ingestion, pattern recognition, market intelligence. Powers PerpsTrader AI — autonomous prediction market analysis and trading.	LIVE
AGENT 02 EXECUTOR	Trade execution, task automation, system operations. Routes \$20M+ combined volume across our own TIDE Protocol and Hyperswap via ML-powered algorithms.	\$20M+ VOLUME
AGENT 03 COMMUNICATOR	Client-facing AI, report generation, brand communication. Powers content and communication across the portfolio — Spider 2, VenymCMO, and more.	MULTI-PRODUCT
AGENT 04 COORDINATOR	Multi-agent orchestration, workflow management, resource allocation. Manages 100+ deployed AI systems simultaneously — every product, every client, every automation.	100+ SYSTEMS

DEPLOYMENT →

EDGE INFERENCE

PRIVATE CLOUD

ON-PREMISE

HYBRID

INTELLECTUAL PROPERTY

We own all IP, data, branding rights, and proprietary technology across every portfolio company. No licensing. No dependencies. The IP portfolio expands every month. This is not a services business wearing a product mask.

MARKET

The market hasn't been built yet.

We're not competing in a crowded space. We're building a new one. The intersection of specialized AI and autonomous physical systems is the largest greenfield opportunity in technology.

FORCE 01

DIGITAL AI (\$1.5T BY 2025)

Worldwide AI spending forecast at \$1.5 trillion in 2025, up from \$987.9B in 2024 — Gartner. Enterprise demand for specialized, private AI is exploding. 30% of GenAI projects will be abandoned after proof-of-concept. Companies need providers who ship, not researchers who publish.

FORCE 02

AUTONOMOUS SYSTEMS (\$100B+ BY 2030)

Drone market: \$163B+ by 2030. Robotics market exceeding \$140B. Autonomous systems across logistics, agriculture, defense, and inspection are still running on pre-AI intelligence. The upgrade cycle hasn't started.

FORCE 03

THE INTERSECTION

By 2027, over 50% of GenAI models will be industry-specific — up from 1% in 2023. The companies that own the intelligence layer for autonomous physical systems will own the most valuable infrastructure play of the decade.

"We're positioned at the intersection of a \$1.5T digital AI market and a \$300B+ autonomous systems market with a unified technology stack."

Intelligence that moves.

The same agent architecture that automates digital workflows today controls autonomous physical systems tomorrow. We're not pivoting — we're expanding the execution surface.

PHASE 01 **COMPLETE**

2025 — Foundation

Built the core AI agent architecture. Deployed autonomous systems for data analysis, trading execution, and brand communication. Launched 5 revenue-generating products. Proved the model.

PHASE 02 **IN PROGRESS**

2026 — Scale

Scaling enterprise AI deployments. Custom implementations growing 15%+ month-over-month. Private edge shipping. SearchHive approaching millions. Building the revenue foundation for Phase 03.

PHASE 03 **NEXT**

2027+ — Physical Intelligence

The same intelligence layer applied to autonomous physical systems. Embedded agentic firmware already built for ESP and microcontrollers. Autonomous drone air traffic control system currently in presentation to government clients. In-house manufacturing capability for drones, robots, electronics, composites, and metal — ready to scale post-raise. Hardware manufacturer partnerships in discussion.

• DRONES

• AUTONOMOUS ROBOTS

• EMBEDDED SYS

• HW MANUFACTURING

• PHYSICAL AI

"The first company to deliver a unified AI intelligence layer from digital to physical wins the most valuable infrastructure position in technology."

TEAM

Solo founder. Complete ownership.

Built 5 profitable AI products from zero to ~\$500K ARR with no outside funding. Infrastructure trusted by major DeFi protocols including our own TIDE and Hyperswap to handle critical systems. Touches every layer of the stack — from embedded firmware to AI agents to production infrastructure. Works fast. Ships faster.

- Full-stack builder — firmware, backend, frontend, AI agents, protocol design, DevOps
- DeFi infrastructure trusted for critical systems — TIDE and Hyperswap power \$20M+ in combined volume
- 100+ custom AI implementations delivered to private clients
- Moving from solo to team — actively seeking creative and engineering talent

PROPRIETARY TECHNOLOGY

- Owns 100% of IP, data, branding rights, and proprietary tech across all 5 portfolio companies
- No licensing dependencies, no third-party IP constraints, no cap table complexity
- IP portfolio expanding rapidly — new proprietary systems shipped monthly
- Spider 2: Custom LLM specifically trained for high-frequency trading — proprietary

"Complete ownership means complete control. No dilution. No dependencies. No ceiling."

THE OPPORTUNITY

The price of entry increases every quarter.

We're looking for strategic partners — not passive capital. People who understand that the intersection of AI and autonomous physical systems is the defining infrastructure play of this decade.

- ~\$500K first-year run rate with zero sales effort and zero outside funding. Revenue-generating from the start.
- 5 owned products. 5 portfolio companies. All IP retained. Clean cap table. 15%+ month-over-month growth.
- The real value isn't in the current revenue — it's in the physical intelligence layer we're building. Drones, robots, autonomous systems. Government interest already validated.
- Solo founder with full IP ownership. Post-raise: scale physical production (drones, robots, electronics, composites, metal manufacturing) entirely in-house.
